- Mapping network drive and printers depending upon the operating systems. (Windows, Mac or Linux)
- Configuration of MS outlook, And Lotus notes. Maximizing the network performance by monitoring.
- Worked on Wireless TCP/IP troubleshoot and Router Configuration.
- Providing the resolution on remote access and troubleshooting network problems.
- Undertaking data network fault investigations in local and wide area environments using information from multiple sources. Perform Quality Analysis tasks, Team leading and Coordination. Discussion with Client on Critical issues.

Projects:

FLIGHT MANAGEMENT SYSTEM:

Project Summary:

The Flight Management System is a Java-based booking solution for flight tickets. It consolidates data provided by different airline carriers and hence provides the user details and rates in real-time. Travelers may want to make changes in their bookings. The application allows them to book, cancel, view and update their bookings with ease.

Other than this, it eases the management of bookings too. All the bookings, flights, schedules and routes can be viewed, added and modified on a single application by the administrator.

Technologies used: Spring boot, Microservices, Eureka Servers and Angular

Responsibilities:

Involved in designing and development.

Conducted trainings on Project Requirement and Case study Leading the team

ONLINE TEST MANAGEMENT SYSTEM:

Project Summary:

This project is aimed at developing an Online Test Management System for users. This is a web-based application that can be accessed throughout the web. This system can be used to add Test, add Questions, assign Test to user & user can give test. This is an integrated system that contains both the user component and the administration component.

Technologies Used: Java8, Spring boot, Microservices, Eureka Servers and Angular8, JUnit 4.0, Maven, GitHub
